

# PLEASE READ BEFORE INSTALLATION

---

This product needs to be sealed with a penetrating sealer in order to avoid the absorption of moisture and staining agents over time. Sealing must be done **before** grouting the tile. We recommend using **AQUA MIX Penetrating Sealer**.<sup>®</sup>

Clean and dry surface  
before sealing.

Apply a uniform layer of sealer  
with a clean brush or other  
suitable applicator.

Wait recommended time  
before removing excess sealant  
from the tile with a clean  
damp cloth.

Crackle glazes continue to crackle for several months. As this occurs, each new crackle line becomes unsealed and will allow water into the tile body. Installations of crackle should be **resealed 90 days after installation**, and then again after one year.

---

## Installation Note:

When cutting crackle glass material, it is helpful to run a bead of Super Glue along the line where the cut is to be made. Let the glue set and cut directly on the line with a clean, sharp wet saw blade.

This procedure allows for a cleaner, smoother cut.
